MATERIALS PROCESSING: THEORY AND PRACTICE, Volume 4

Dry Etching for Microelectronics

edited by R.A. POWELL

1984 xiv + 298 pages Price: US $69.25/Dfl. 180.00 ISBN 0-444-86905-0
Subscription Price: US $59.50/Dfl. 155.00

Over the last decade, dry or plasma-assisted etching has emerged as an indispensable tool for the manufacture of microelectronic circuits, replacing traditional wet chemistry for etching and pattern transfer.
The present volume collects together for the first time a series of in-depth, critical reviews of important topics in dry etching. This topical format provides the reader with more specialized information and references than found in a general review article. In addition, it presents a broad perspective which would otherwise have to be gained by reading a large number of individual research papers. An additional important and unique feature of this book is the inclusion of an extensive literature review of dry processing, compiled by search of computerized data bases. A subject index allows ready access to the key points raised in each of the chapters.

CONTENTS: Plasma-assisted etching of aluminium and aluminium alloys *(D.W. Hess and R.H. Bruce).* Plasma etching of refractory metals and metal silicides *(T.P. Chow, A.N. Saxena, L.M. Ephrath and R.S. Bennett).* Dry etching of Group III-Group V compound semiconductors *(R.H. Burton, R.A. Grottscho and G. Smolinsky).* Reactive ion beam etching *(R.A. Powell and D.F. Downey).* Dry etching for microelectronics - A bibliography *(L.C. Molieri).* Subject index.

ZEITSCHRIFT FÜR METALLKUNDE

Official journal of the German Society of Metallurgy (DGM)

Edited by G. Petzow, P. Haasen, V. Schumacher

Subscription 1986: 12 issues. $ 124,— (incl. postage)

The international journal is published monthly and includes approximately 850 pages/year. The journal is covering the production, processing, metallurgy and properties of non-ferrous metals and their alloys. Also the large scale of new materials and their properties. All articles of technical and scientific content are summarized in English. Original papers are in english language (approx. 60 %). Conference reports, industrial product information and book reviews are regular features.

Sample copies upon request.

Praktische Metallographie

Practical Metallography

Monthly journal in German and English

Edited by G. Petzow

Subscription 1986: 12 issues. $ 60,— (incl. postage)

Practical Metallography contains original contributions out of industrial practice and research, review articles from well-known experts for various areas in metallography, reports on improvements and innovations of metallographic methods and apparatus, contributions on metallographic investigations of known and new materials, procedure, tips, recipes – an opportunity to exchange experience on problems of specimen preparation and evaluation –, description of failure analysis, reviews of technical books and summaries of articles of interest from other journals, detailed index at the end of the year; thus, the journal grows continuosly as a book

of references for all questic related to metallography: n developments in metallc raphic, optical and measuri techniques and apparatus; formation about all meetir of interest to metallographe around the world; and abo education, continuing edu tion and professional and c cupational opportunities.

Sample copies upon reque
